

Your bottom line could very well depend on How well you protect your sensitive data

In today's world of data hackers, security breaches and rogue employees, why take a risk with your data security? Protecting your most important asset should be a high priority. Randtronics solutions enable your company to protect sensitive data for security and compliance requirements.

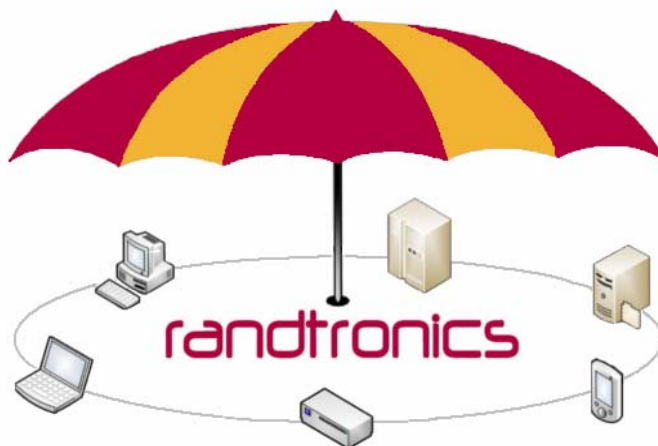

Why you should invest in encryption

- **STOP** Data Leakage. Protect against the 'insider' threat and risks.
- Compliance with regulatory and privacy legislation; PCI DSS, GLBA, HIPPA, SOX, Australian Data Privacy, European Data Privacy.
- Avoid legal liability of exposed personal data
- Demonstrate to Employees, Partners, Contractors and Regulatory Bodies that you value your sensitive data.
- Move beyond legacy architecture of edge security to data privacy architecture to meet future developments and threats.
- Avoid financial impact of mandatory reporting of data loss.
- Reduce the cost of ongoing compliance

Randtronics represents a wide range of vendors which provide different solutions depending on the security, performance, scalability, flexibility, redundancy and budget requirements.

- Mobile Devices (Windows Mobile, Palm, Blackberry, Symbian)
- Laptop and Desktop
- Database Servers (SQL Server, Oracle, DB2, Sybase, Teradata, Informix, MySQL)

- File Servers (Windows, Red Hat, IBM AIX, Sun Solaris, HP-UX)
- Removable Media (USB, Hard Disks, Tapes)
- Data Masking and Tokenisation
- HP Non-Stop
- SAP, Peoplesoft and Siebel
- IBM Midrange and Mainframe

securing your business

Randtronics: Providing Encryption Solutions for All Requirements

Randtronics represents a wide range of vendors providing different solutions depending on the customer's budget, security, performance, scalability, flexibility and redundancy requirements. We have in-house understanding on how multiple products can be used to complement each other to architect the best solution. Randtronics provides a single supplier interface to multiple vendor encryption solutions. Randtronics has the necessary expertise within tokenisation technologies to design solutions that complement encryption products.

Randtronics: What We Offer to the Market

Randtronics provides the following Professional Services to their customers, resellers and industry partners.

Product Selection Consulting – Randtronics assists organisations in selecting encryption technologies and has a solutions approach to address real requirements. Randtronics has a proven methodology to save time, cost and resources for product selections and recommendations. Randtronics has established partnerships with the industry's leading encryption vendors, aimed at creating the best possible solution for our customers.

Security & Compliance Services – Randtronics offers timely and cost effective security consulting expertise that bridges the knowledge 'gaps' in helping organisations meet security protection and compliance needs. This includes professional services around PCI Compliance, Security Consultancy and Data Leakage Protection.

Cryptographic Software Integration - Randtronics has a team of experienced software developers with cryptographic skills in areas of .Net, COM, Java, C/C++, PHP, MSCAPI, PKCS#11, COBOL, ABAP and XML to assist customers. Randtronics provides customised solutions to meet increased security, performance or legacy application integration needs.

Support Services – Randtronics provides support throughout Australia and the Asia Pacific region. Local country support and access to vendor solutions is available through either Randtronics representative offices or certified partners located throughout Asia Pacific.
